

Busing in Project5 2.5

Along with the ability to send to all your device's outputs, Project5 2.5 puts bus selection where you need it for all the controls.

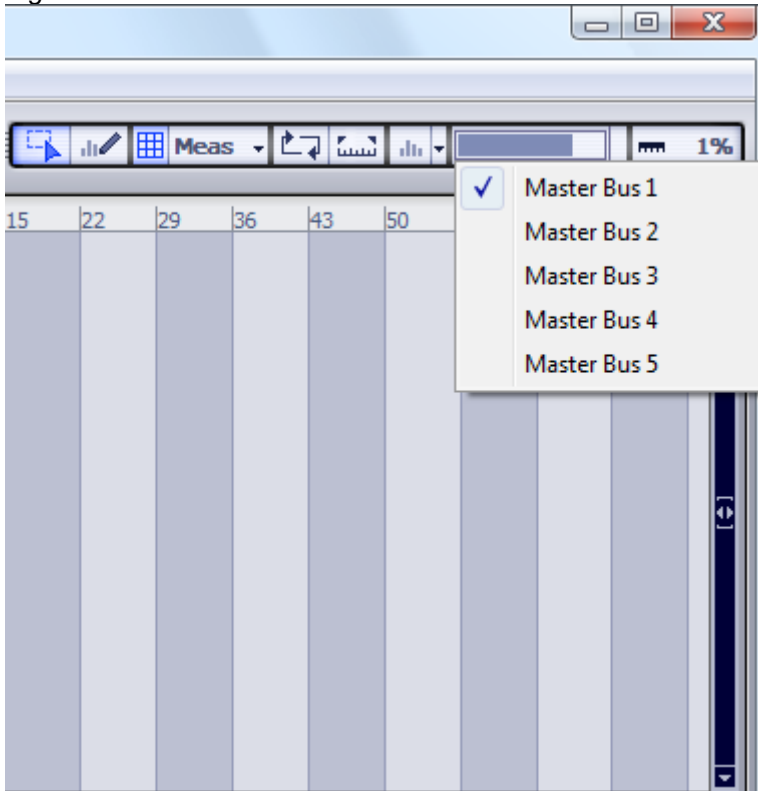

The metronome can be started and stopped without interrupting audio playback, and can be easily sent to any output by right clicking the control and selecting the output.

Fig. 1

The master volume control can be easily changed to control the various master buses with a right click as well.

Fig. 2

If you have applied the 2.5.1 update, you can easily change the output for the audio preview bus as well... browse to preview and pick your sound in your headphone bus, and send it out to mains without interrupting playback.
