

Installing Velocity Banks

To install the Velocity banks files, you must be logged in as Administrator.

Velocity looks for banks and content in its own folder in the Shared DXi folder. This location of this folder can be changed when installing but by default it will go to C:\Program Files\Cakewalk\Shared DXi\Velocity\Banks\

Fig. 1

Simply lasso all the p5d files and content folders and drag them into this folder. If you are running Vista, confirm the warnings that come up when copying files, since you do in fact want to copy them to this folder.

Now when you insert Velocity into a project, the new banks will be listed in the Velocity banks list on the lower right hand side of the Velocity property page.

Fig. 2

Click, hold and drag down the list to select.

When you have your sound, you might want to create a preset for it, so you don't have to open the Velocity property page to choose the new bank. To do this, just write a preset name in the text box at the top of the synth Window, and click the floppy icon to save it.

Fig. 3

After creating your preset, you will be able to select it directly from the Inspector view in Project5.
